DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-10, drawn to data transfer means or steps for defining a characteristic of a desired transfer of data, classified in class 710, subclass 33.
 - II. Claims 11-12, drawn to addressing means of the peripheral device for data reading and writing purposes, classified in class 710, subclass 3
 - III. Claims 13, 14, 28, 29, drawn to method of providing interrupt signal when a buffer is full, classified in class 710, subclass 260
 - IV. Claim 15-27, drawn to subject matter for cryptographically protecting the transfer of data among a plurality of data, classified in class 713, subclass 150.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions Group II & IV and Group I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because in order for the system to function as claimed, one would not need the data to be secured by using cryptographic processing circuit. The subcombination has separate utility such as being able to perform the tasks in setting outside of a server. For instance, the said "cryptographic processing control circuit" could be implemented in an environment outside the one claimed in Group I in order to simply secure any said data.
3. Inventions Group III and Groups I, II and IV are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another and materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case Group III is a method of controlling inter-bus communication whereas Groups I, II and IV are inter-bus communication interface

device. Furthermore, Group III reads on generating interrupt signals for a given action where as the remaining Groups do not read on any such limitation.

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

5. Because these inventions are distinct for the reasons given above and the search required for one group is not required for another group, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement is traversed (37 CFR 1.143).
